- Lightning effect with thunder sound effects.
- Wind particle system with wind sound effect.
- Atmospheric demo scene included to show rain storm effect to it's fullest.
- Mist fog effect, generates around player to create more atmosphere.

Information

Drop the existing “Rain Storm Parent Mobile” prefab onto your existing first person controller or use the “Mobile First Person Controller” prefab already setup. That's it, try walking around and see the effect get created around you and follow you. Also drop the “Wind Parent Mobile” prefab into your scene for a particle wind fog effect and sound effect. Drop the “Lightning Parent Mobile” prefab into the scene for a thunder and lightning effect. There is also a “PC First Person Controller” setup to test the effect in Unity on your desktop computer.

To reduce the effect to improve frame rate for your project, click on the “RainInner” or “RainOuter” object under “Rain Storm Parent Mobile” on your camera. Then click the Emission tab on the particle system in the inspector and lower the Rate count to what works for you. Also you can remove or turn off the “Mist Fog” effect to improve frame rate if it is an issue.
